MINT **ERROR** NEWSTM MAGAZINE

Bringing the latest mint error news to the collector.

Mike Byers, Publisher & Editor, Welcomes You!

Welcome to Mint Error News Magazine, bringing the latest mint error news and information to the collector. This is our fifth year bringing you both a print magazine and an online PDF magazine. There are now over 450 articles, features, discoveries, news stories with mint error related info from the United States and around the World. Minterrornews.com has become the most popular and informative Internet resource for mint errors and is read by thousands of dealers and collectors.

Mint Error News was originally sponsored by Mike Byers and ANACS. Due to the popularity of mint errors and the magazine it is now sponsored by Mike Byers and several other mint error dealers including Allan Levy (alscoins.com) and Fred Weinberg (fredweinberg.com). Mike Byers is the Publisher and Editor of Mint Error News Magazine.

BYERS NUMISMATIC CORP
MIKEBYERS.COM

The Largest Dealer of the World's Rarest Mint Errors™
U.S. & WORLD MAJOR MINT ERRORS • DIE TRIALS • NUMISMATIC RARITIES

Al's Coins
P.O. Box 147
National City, CA 91951-0147

e-mail: alscoins@aol.com
Website: alscoins.com

Mike Byers (mikebyers.com) has been a Professional Numismatist since 1978. He is the largest dealer of the world's rarest mint errors. He handles the world's finest major mint errors and numismatic rarities. He specializes in U.S. and World Major Mint Errors and Die Trials. His new discoveries of major mint errors have been front page news for years. He is a life member of ANA since 1985, a

charter member of NGC and a featured dealer/member of PCGS. He is a founder member of the California Coin & Precious Metals Association. He is also a life member of the Central States Numismatic Society and the Florida United Numismatists. Mike Byers was a Consultant for ANACS for Mint Errors from 2000 through 2006.

Allan Levy has been specializing in Mint and Currency Errors for 25 years. His web site features a diverse group of type errors, modern errors and major currency errors. He also handles regular U.S. and World coins. Allan Levy is a member of CONECA and the American Numismatic Association.

Fred Weinberg & Co.
Dealer in Major Mint Error Coins & Currency
fredweinberg.com

Fred Weinberg is the President of Pacific Rim Numismatics (DBA Fred Weinberg & Co.). He is a highly respected numismatist, with 35 years of full time experience in the rare coin marketplace. His professional associations include the American Numismatic Association (ANA) (38 years), the Professional Numismatist Guild (PNG) (31 years), The Industry Council for Tangible Assets (ICTA) (21 years) and The Numismatic Literary Guild. He is a past President of the Professional Numismatist Guild (1999-2001).

Additional sponsors of Mint Error News are Heritage Auction Galleries, CoinLink, CoinFacts.com, uspatterns.com and errorworldclub.org. We encourage collectors and dealers to submit articles and photos of major mint errors that we may feature on the website.

Off-Center Errors

by Al Levy (alscoins.com)

Here are records of recent sales of off-center mint errors on eBay:

1. All coins were listed on eBay and closed from July 1, 2006 to September 30, 2006.
2. All lots had buyers. If the coins actually changed hands is unknown.
3. A picture accompanied each lot or it was not recognized.
4. Mislabeled items were ignored.
5. Some lots may have changed hands more than once.

6. "D" next to the date symbolizes that the coin had damage or was scratched.
7. "C" next to the date symbolizes that the coin was cleaned.
8. "B" next to the date symbolizes that the coin had damage and was cleaned.
9. If the date or mint mark was missing or partially visible, parentheses were used.
10. Postage/handling/insurance fees were ignored.
11. Major auctions were not listed.

**Saul Teichman's
Want List**

Saul.Teichman@ey.com

I am looking for the following off-metal errors:

Wartime Nickel on a copper cent planchet	Ike Dollar on a quarter planchet
Bicentennial Half on a copper cent planchet	Sacagawea Dollar on a cent planchet - if it exists
Bicentennial Half on a dime planchet	Sacagawea Dollar on a nickel 5 cent planchet
Kennedy Half on a Sacagawea dollar planchet - if it exists	Sacagawea Dollar on a dime planchet - if it exists
Ike Dollar on a nickel 5 cent planchet	

Off-Metal & Clad Layer Split-Off Errors

by Al Levy (alscoins.com)

1. ALL LOTS HAD BUYERS. IF THE COINS ACTUALLY CHANGED HANDS IS UNKNOWN.
2. A PICTURE ACCOMPANIED EACH LOT OR IT WAS NOT RECOGNIZED.
3. BLURRY PICTURES OR OTHER PROBLEMS ARE NOTATED UNDER "OBSERVATION".
4. ITEMS MISLABELLED COMMANDED A SMALL PREMIUM.
5. SOME LOTS CHANGED HANDS MORE THAN ONCE.
6. ANY SCRATCHES, DENTS OR DEFECTS NOTATED WERE EITHER IN THE DESCRIPTION OR GRADING SERVICES' HOLDERS.
7. AUCTION HOUSES THAT LISTED THESE ERRORS WERE IGNORED.
8. SHIPPING CHARGES ARE NOT INCLUDED.

FROM 07/01/06 TO 09/30/06

NORTHEAST NUMISMATICS INC. RARE COINS · PERSONAL SERVICE

Northeast Numismatics
10 Concord Crossing, Ste. 220
Concord, MA 01742
800-449-2646
www.northeastcoin.com

Northeast Numismatics has an impressive inventory of over 1,200 U.S. and foreign coins. We have a strong selection of mint errors, both U.S. and foreign. And we carry every area of United States coinage from colonials through rare gold including type, commemoratives, silver dollars and much, in addition to our extensive inventory of world coins.

High quality "fresh" coins are what we are known for and take pleasure in offering. We constantly are hearing from our customers about our excellent prices and high customer service. 2003 is our 39th year of business, so order with complete confidence. Also, please keep in mind that we are always buying coins of all kinds, certified and uncertified, to fill our want lists.

Buffalo Nickel "Speared Bison" & Wisconsin Quarter "Extra Leaves"

by Al Levy (alscoins.com)

PLEASE NOTE: THE ERROR TYPES LISTED BELOW WERE EBAY LOTS THAT CLOSED WITH A HIGH BIDDER. IF THE RESERVE PRICE WAS NOT MET, OR PICTURE WAS NOT ATTACHED, THEN I IGNORED THE AUCTION. FUZZY PICTURES, OR QUESTIONABLE DESCRIPTIONS ARE NOT INCLUDED.

AN IMPORTANT OBSERVATION ABOUT THE BUFFALO 5c "SPEARED BISON" & THE "WISCONSIN" 25c EXTRA LEAFS ARE EBAY ITEMS ONLY. DEALERS ARE SHOWING INTEREST IN BUYING THESE ITEMS FOR INVENTORY. A NEW UPI NEWS RELEASE CREATED A NEW INTEREST IN THE "WISCONSIN

LEAF" ERRORS FUELING AN INCREASE. MS 67 PCGS/NGC ARE SHOWING VERY STRONG PRICES.

THE HIGH LEAF IS SUPPOSE TO BE SCARCER THAN THE LOW LEAF. CHECK OUT THE SALES TOTALS AS BOTH VARIETIES ARE ABOUT THE SAME IN QUANTITIES. BOTH, VERY MUCH IN DEMAND.

END OF ROLL COINS. COLLECTORS NEED TO KNOW THAT THERE IS A MACHINE ON THE MARKET THAT WILL ALLOW ANYONE TO ROLL YOUR OWN COINS. IT IS A CRIMPING MACHINE TO BE USED WITH PRE-CRIMPED (SHOTGUN SHELL) STYLE WRAPPERS.

Doubled Dies

by Al Levy (alscoins.com)

I DID NOT COMPARE THE LISTED DIE NUMBER IN THE AUCTION TO THE DESIGNATED DIE NUMBER ACTUALLY ASSIGNED. THERE WERE TOO MANY VARIETIES TO TRY AND COMPARE SO I TOOK THE WORD OF THE SELLER. IT WAS INTERESTING TO NOTE MANY OF THESE DOUBLED DIES WERE LISTED BY THE AUTHENTICATORS. MANY OF THE COINS LISTED DID NOT SELL. PCGS GRADED COINS BROUGHT THE HIGHEST PRICES.

NGC Certifies 1804 \$2½ Capped Bust Double Struck First Strike Off-Center

All major mint errors on U.S. Gold coins are very rare. This 1804 \$2½ Capped Bust To Right type is extremely rare with a mintage of 3,327. The reverse is the fourteen star variety. NGC just certified this discovery coin double struck first strike off-center and graded it Fine 15.

There are less than a dozen double struck U.S. Gold coins known. This piece is exciting for several reasons in addition to just being discovered. It is double struck on the first type of U.S. \$2½ gold coins (1796-1807) and is a rare type coin which is seldom encountered.

This type of double strike is also rare since the first strike was 25% off-center and then was centered and struck a second time with a 15° rotation. Much detail is visible from the original strike. The reverse is visually more dramatic than the obverse since much of the eagle and surrounding detail is visible (off-center) underneath the eagle from the second strike.

Several double struck U.S. gold coins which I have handled or currently own have a slight rotation between the strikes and were struck in the collar. This is only the second time I recall ever seeing another double struck U.S. gold coin where one of the strikes was off-center. The other piece is an 1806 \$5 Triple Struck Rotated 90° PCGS AU 50 which has one strike 10% off-center and is currently in my inventory.

This double struck \$2½ is a unique and spectacular mint error and would be the centerpiece of a U.S. Gold collection or a collection of major mint errors.

Morgan Dollar Reverse Die From San Francisco Mint

There are only a few known Morgan Dollar canceled dies from the San Francisco Mint. This reverse die is in excellent condition with minimal rust and nominal marks. Not only would this be an amazing centerpiece to a United States coin collection, it is of such numismatic importance that it could be placed in a historical museum or collection of Morgan Dollars or San Francisco coins.

1859 Indian Head Cent Deep Obverse Die Cap

Although there are a few Indian Head Cent die caps known, the fact that this is an incredible deep obverse die cap and on a 1 year type coin (1859) makes this mint error the centerpiece of any collection. This die cap struck so many blanks that it barely fits in the PCGS slab.

1862 Indian Head Cent Deep Obverse Die Cap

There are only a few known Indian Head Cent die caps. This is an incredible deep obverse die cap. It is struck on the 1860-1864 Cu-Ni planchet. This die cap is in choice mint state condition and would be the highlight of any mint error collection. This obverse die cap is so deep that it will not fit in a PCGS, NGC, ANACS or ICG holder.

Spectacular Mint Errors Sell in Recent Heritage Galleries Auctions

Editor's Note: The following mint errors sold in the 2006 August Denver, CO Signature & Platinum Night Auction #414 and the 2006 September Long Beach, CA Signature Auction #416.

Coin Punch Presses

Here are photos of two different types of punches used at different times at the U.S. Mint.

COINING.

We publish on our previous page a series of engravings illustrating the various processes employed in the manufacture of money, a business which, being mostly in the hands of governments, is not in the category of ordinary manufacturing operations, but which is, nevertheless, a very extensive and important trade. The amount of money annually minted is prodigious; and the necessity for perfect accuracy in weight and fineness of every coin gives the business the peculiar interest attaching to all minute and delicate operations conducted on a very large scale.

The first step is the mixing of the alloy, which in this country consists of 9 parts pure metal to 1 part alloy. The alloy for silver coin is copper; for gold, a mixture of silver and copper, the proportion of silver in the mixture being not more than one half. In practice, but a small portion of the alloy for gold is silver. The silver is readily prepared for coining; but the gold frequently is found to be brittle when cast into ingots, owing to the presence of impurities. Many of these foreign matters are diminished by treating the molten metal with a stream of chlorine gas. When the standard of purity is accurately adjusted, the metal is cast into ingots, long enough in proportion to their thickness to be rolled into strips of the required thickness (see Fig. 1). The ingots are then heated (Fig. 2) and rolled into long strips (Fig. 3). In our Fig. 4 is shown the operation of punching out circular disks from these strips; and this process is one of great nicety, as the disks require to be so nearly correct in weight that the final adjustment can be readily made. In Fig. 5, is shown the weighing room, where any trifling overweight on each disk is removed with the file, care having been previously taken to make the pieces over rather than under the correct weight. Fig. 6 shows the coining presses, in each of which are a die and a countersink, engraved with the devices for the obverse and reverse sides of the coin respectively. This operation completes the coin, except as to its edge, which is finished by the machine shown in Fig. 7, which raises the circumferential rim which protects the embossed face of the coin from abrasion by friction in use. This machine rims from 800 to 900 coins per minute; and words or devices can be embossed on the rim, when required, by a straight steel die, against which the coins are pressed with great force, and rotated. Milled edges are made by this machine, the die being properly cut for the purpose.

The coin is now finished, being perfect in value, weight, and form; and all that now remains to be done is to cleanse it from the dirt of the manufacturing processes, and give it the beautiful appearance which characterizes new money. This done by scouring and washing, as shown in Fig. 8; and the money is then put up in packages for storage, as shown in Fig. 9. The waste strips are readily beaten into ingots, as shown in the same engraving; and all filings and dust of the precious metals are carefully saved.

The series of illustrations gives a clear and accurate idea of the system generally in use; but of course the processes are varied in different establishments.

Radically Misaligned Die Clashes in Recent Lincoln Cents—The Roster Grows

By Mike Diamond

One of the more common mishaps to plague coinage presses since their very inception is “clashed dies” (known in mint parlance as “come together”). Clashed dies (or die clash) occurs when the hammer and anvil die smack into each other when a planchet fails to get fed into the striking chamber. Ordinarily, the dies are adjusted so that at their closest approach there is still little a bit of clearance between them even in the absence of a planchet. However, if they fall out of adjustment, contact can occur.

When dies clash, each die leaves a light and incomplete impression of its design on the opposing die. The impressions, which are raised and normally-oriented on the die, are transferred to each newly struck coin as a set of incuse (sunken), mirror-image design elements. These incuse design elements are known as “clash marks”. The most superficial areas of the die face are the ones most vulnerable to die clash. These include the field and the shallowest recesses in the die face, which equate to the areas of lowest relief on the coin.

Weak clash marks generally don’t excite me, as they are common in all years and all denominations. I do make an exception, though, for clash marks that are wildly out of place as the result of a die misalignment. A die misalignment (specifically a horizontal misalignment) occurs when one die is offset relative to the other die. Since the anvil die is confined by a fixed collar, it’s usually the hammer die that shifts to

one side. There are some notable exceptions, though (Diamond, 2004c)

Over the last few years quite a few radically misaligned die clashes (often referred to as “MAD clashes”) have been found among Lincoln cents. Almost all are from the 1990’s, with one as recent as the year 2000. Many of these clashes also show evidence of a major vertical misalignment (tilted die error). In other words, the opposing die faces were not perfectly parallel to each other when contact occurred. One of the dies (presumably the hammer die) struck the opposite die at an angle, leaving (or picking up) an impression of the design at just one pole. A few of the clashes also show evidence that one of the dies was rotated or pivoted – hence the additional terms “rotated die clash” and “pivoted die clash”.

I wrote two earlier articles on this phenomenon for the magazine *Errorscope* (Diamond, 2004a,b). This is the magazine put out by CONECA – The Combined Organizations of Numismatic Error Collectors of America. Since a number of new specimens have been discovered since my last treatment, it seemed opportune to present an update.

Let’s go through a line-up of the best of these misaligned die clashes, in chronological order. Since some of the readers of *Mint Error News* don’t subscribe to *Errorscope*, this account will cover all of the best specimens, old and new.

Figure 1. Misaligned and tilted die clash in a 1992 cent. A curved ridge representing the edge of the field portion of the obverse die is located to the left of Lincoln's coat. One or two letter traces are located just inside the curve. Coin courtesy of Richard Imburgia.

Figure 1 shows the earliest example to date – a 1992 cent discovered by Richard Imburgia. Richard has been relentless in his pursuit of MAD clash cents, and has discovered a considerable number of new examples over the last three years. In this particular specimen we see a ridge representing the edge of the field portion of the die. Just above that are faint letter impressions. In reconstructing the events leading to this and all the other clashes under discussion, I am assuming that the reverse die was fixed and normally oriented in all three planes. Whether this was actually the case will be discussed at the end of this article. In this coin, the obverse die was evidently misaligned about 20% toward the south and also strongly tilted, so that it made contact with the northern pole of the reverse die. The vast majority of MAD clash cents show a misalignment of the obverse die toward the south. It is impossible to make out the letters, so there's no way to tell whether the obverse die was also rotated or pivoted.

Figure 2 shows the best-known and most easily acquired example – a 1995 cent. Here we see a raised impression of the edge of the field portion of the die and, above that, letter traces. The letter traces are clear enough that I can make out the "F" of "oF" protruding from the front of Lincoln's coat and the "ES" of STATES within the bust. On the reverse face,

Figure 2. Misaligned and tilted die clash in a 1995 cent. Coin acquired from Mike Ellis.

you can just see the outline of the front of Lincoln's coat passing through the "F" of "oF". The physical evidence once again indicates that the obverse die was tilted and misaligned toward the south, with the shift amounting to about 20% of the width of the obverse die face.

Figure 3. Tilted and pivoted die clash in a 1996 cent.

The following year was quite busy, with no less than three cases showcased here. Figure 3 shows a 1996 Lincoln cent with the incuse letters "ST" from STATES peeking out from beneath Lincoln's bust, between the edge of the bust and the design rim. Just below the letters is a ridge representing the edge of the field portion of the die. The obverse die shows no obvious horizontal misalignment, but it was tilted and pivoted. The obverse die had pivoted counterclockwise, with an axis of rotation probably located somewhere near the rim between 1:00 and 5:00.

Figure 4. Misaligned and tilted die clash in a second 1996 cent. Coin courtesy of Richard Imburgia.

The second 1996 specimen is shown in Figure 4 and comes from Richard Imburgia. We can see the familiar curved ridge with letter impressions just inside the curve. They seem to represent the “ER” of AMERICA. Here it looks like the obverse die shifted about 20% to the southeast, with the now familiar downward tilt.

Figure 5. Misaligned and tilted die clash in a third 1996 cent. Coin courtesy of Richard Imburgia.

The third 1996 specimen also comes from Richard Imburgia (Figure 5). It shows the usual curved ridge (again from the edge of the field portion of the die) and a faint letter trace. The letter might represent the “S” of STATES. It appears the obverse die shifted to south or southwest, but certainly tilted down toward the southwest position. If the letter identification is correct, then the die appears to have undergone a counterclockwise rotation as well.

Figure 6. The first of three clashes in a single 1997 cent. This clash shows an extreme misalignment along with die tilt. Coin courtesy of Richard Imburgia

The newest – and wildest – specimen is also an Imburgia discovery. This 1997 cent shows no less than three misaligned die clashes, each one in a different orientation relative to the others. The strongest clash emerges from the front of Lincoln’s coat where we see a curved ridge and letter traces just above it (Figure 6). I cannot identify the letters, unfortunately. Below the bust, on the inner border of the design rim, we see a second clash represented by the tops of several letters – also unidentified (Figure 7). Finally, there is a faint clash in the center of Lincoln’s coat (Figure 8). It appears that the strongest clash (Fig. 6) occurred as the die was shifted toward the south (or southeast) and

tilted toward the southeast. The medium-strength clash (Fig. 7) apparently occurred when the die was simply tilted down; no horizontal misalignment is indicated.

Figure 7. The second of three clashes in this 1997 cent. Letter impressions just inside the design rim indicate die tilt only.

The weakest clash (Fig. 8) seems to represent another combination of horizontal misalignment and vertical misalignment.

Figure 8. The faintest of the three die clashes in this 1997 takes the form of a faint curved ridge in the middle of Lincoln's coat (arrow).

Things are pretty quiet the next year, but heat up again in 1999.

Our first 1999 specimen comes from G.J. Lawson and shows a curved ridge emerging from the back of Lincoln's coat with a single letter trace ("T"?)

just inside the curve (Figure 9). Once again, the evidence indicates a strong horizontal misalignment toward the south and a downward tilt toward the south-southwest.

Figure 9. A 1999 cent with a misaligned and tilted die clash to the left of Lincoln's coat. Coin courtesy of G.J. Lawson.

The second specimen from 1999 – once again from Richard Imburgia -- is only represented by a curved ridge that occupies a similar position to the first 1999 specimen (Figure 10).

Figure 10. A second 1999 cent with a misaligned and tilted die clash to the left of Lincoln's coat in almost the same position. Coin courtesy of Richard Imburgia.

Our last specimen – a 2000 cent – comes from Bob Mohan. We see the incuse, mirror-image letters “URIBUS” in the gap between the base of Lincoln’s bust and the design rim (Figure 11). This is the only specimen so far where a shift to the north is indicated. Evidently the hammer die was misaligned about 14% toward the north, and the perimeter of the obverse die face contacted the motto above the Memorial (PLURIBUS).

Figure 11. A 2000 cent with a misaligned and tilted die clash located in the gap between Lincoln’s bust and the design rim. This is the only example so far with the misalignment toward the north. Coin courtesy of Bob Mohan.

These nine cents are not the only examples of extreme misaligned/tilted die clashes from the years 1992 – 2000. Richard Imburgia has come up with several other candidates. However, some of these were questionable as they consisted of only a very faint, very short ridge that could just as easily have been a die gouge or die dent. One or two others were good candidates, but so faint that they were impossible to photograph adequately. These other specimens – both legitimate and questionable – show the predominant pattern of a southward misalignment and downward tilt toward the south.

After all this, what can we conclude? First of all, I think something strange is going on that sets these specimens apart from conventional die clashes. The extreme misalignments and consistent tilting are not consistent with run-of-the-mill press malfunctions. Misaligned die errors of over 10% are very rare, yet most of these coins indicate misalignments of 20% or more. Tilted die errors (vertical misalignments) are quite rare, yet the vast majority of these clashes show unmistakable evidence of severe die tilt. I previously speculated that perhaps bored technicians were clacking dies together. But the consistent directionality of the horizontal and vertical misalignments would seem to undermine that hypothesis. Perhaps these are mishaps that occur during installation.

There are lots of other odd patterns to ponder. Why only cents? Why only this decade? Why nothing after 2000?

As we ponder these questions, we can take satisfaction in the certainty that more of these intriguing errors await discovery.

Blanks & Planchets

The Best Little Secret In Errors

by Rich Schemmer (richerrors.com)

Collecting Blanks & Planchets can be one of the most challenging collecting areas.. Blanks (or Type 1) are the punched out metal disc before they receive a raised rim from the Upset mill, which makes them a planchet (or type 2). Which only after being struck by the dies do they become a “Coin”.

So many collectors know so very little about this subject, making them the perfect area to collect as many are still reasonably priced and have great potential growth possibilities.

We prefer our readers to buy certified examples by PCGS, NGC or ANACS. As they weigh and check specifications of the Blanks or planchets. You could do it yourself, if you have a good scale, calipers and know how to do a Specific Gravity test! Wouldn't it be easier to let the certification companies do it and this way you won't have to do it everytime before each individual customer when it comes time to sell. Whew!!!!!!

Think about the difficulty of this challenge! Half cent, large cent, Three Cent silver & Nickel, Two cent, Silver dollar, SBA, Sac \$ and even the American Silver Eagle Dollar (1986-current date). Are you aware one of the very hardest Blanks to come across is the current copper plated zinc cent Blank (type 1).

Very few have been found and one major error dealer once offered \$100 for one!

We have seen near complete sets of planchets housed in a 19th & 20th Century plastic set holders for coins. Well after all, they are the same dimensions, making it a perfect holder for raw (non-certified) planchets.

We believe if your looking for a market that has not yet exploded, this may be it? Blanks & Planchets could transcend both the Error hobby and any series of U.S. coins. After all would any series of coins be complete without the unstruck planchets?

Two Known

Unique

Four Known

1864 2¢ Obverse Die Cap Mated With Brockage

Major mint errors in the 2¢ series are very rare. This super deep obverse die cap mated set came from a major mint error collection that was assembled over 30 years ago. The obverse die cap is so deep it did not fit in a PCGS slab but was authenticated and has the official PCGS insert and photo proof.

It is amazing that this unique 2 piece die cap pair survived almost 150 years. Both coins are in original mint state condition. This is only one of three known die cap pairs on any U.S. denomination prior to 1940. It is a spectacular mated pair and it is exciting to see it again after 3 decades.

CONECA

The Combined Organizations of Numismatic Error Collectors of America

CONECA is a national numismatic organization devoted to the education of error and variety coin collectors. CONECA focuses on many error and variety specialties, including doubled dies, Repunched mintmarks, multiple errors, clips, double strikes, off-metals and off-centers -- just to name a few. It publishes an educational magazine, The Errorscope, which is printed and mailed to members bimonthly. CONECA offers a lending library, examination, listing and attribution services; it holds annual meetings at major conventions (referred to as Errorama) around the country, and offers auction services to its members. Please visit conecaonline.org and enjoy!

CONECA Variety Attribution Services

CONECA offers two attribution services. One service enables members and non-members to send their coins directly to an authorized CONECA attributer. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins attributed by a CONECA attributer and then graded and slabbed by ICG.

CONECA Error Examination Services

CONECA offers two examination services. One service enables members and non-members to send coins to an authorized CONECA examiner who will return an opinion of each coin's error classification. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins examined by a CONECA examiner and then graded and slabbed by ICG.

Consign Your Coins to Mike Byers

Terms and Conditions

We are offering this service for error collectors and dealers alike. The reason why we are doing this is to promote the error business through the world wide web and to connect error collectors with the coins they have been searching for. In order to post your item on our web site: byersnc.com, you must agree to the following terms and conditions.

1. All major U.S. mint errors are accepted if they are certified by ANACS, PCGS, NGC or ICG.
2. The approximate value of each item must exceed \$3,000.
3. Byers Numismatic Corp charges a 10 % commission for each sale.
4. The minimum time for any listing is thirty days.
5. Seller agrees to a seven day return privilege from date of receipt.
6. Seller agrees to use an escrow service if requested by the buyer.
7. We reserve the right to deny or cancel any listing at any time.
8. All listing are subject to prior sale.

Please do not offer us the following:

1. More than two coins bonded together.
2. Caps more than ½ inch high.
3. U.S. Errors that were obviously and intentionally struck as error coins. No impossible mint errors.

We only accept consignments of U.S. Errors that were legitimately found or released thru normal distribution channels.

Scanning Specifications

1. Scan both the obverse and reverse of the entire holder.
2. Scan with a resolution of at least 300 dpi.
3. Save the picture in jpeg format (jpg).

Information Requirements

In addition to e-mailing a photo of your item, please include the following information:

1. Name, Address & Phone Number
2. E-Mail Address
3. Asking Price

After your item is listed, we will contact you by e-mail with any offers and questions. Once a price is agreed upon we will handle the entire sale for a 10% transaction fee, which includes all costs (eBay fees, grading fees, webmaster charges, postage and registration fees, insurance, paperwork, etc.).

If you have a Mint Error collection for sale or would like to sell your duplicates and do not want to consign your coin(s), we can purchase your entire collection outright. Please contact us at mike@mikebyers.com.

ANACS is the Collector's Choice because we know what counts: knowledge, integrity, and service. How much we value coin collecting is evident in our work.

The ANACS team enthusiastically works to advance coin collecting by offering unequaled expertise and developing new services.

This makes ANACS the choice of hobbyists, professional numismatists, and dealers. We are the coin grading service to contact when you want to know all the details about your coin's authenticity and grading.

Mint Error News Price Guide

- Entire Price Guide Updated 10/01/06 -

This price guide is brought to you by Mint Error News. It has been compiled by many of the top major mint error dealers.

This price guide is a guide. Prices fluctuate due to the date, grade, eye appeal and how dramatic the striking error is. Rarity is also a factor. The price is sometimes based on the rarity and grade of the type of coin as well as how rare the error is. The price can also vary depending on whether two collectors are bidding for the same rare major mint error. When purchasing a mint error, it is important to use multiple resources to determine value, as there are many mint errors that do not fit into one category.

Proof Errors

Proof coins are struck by technicians who hand feed the blanks into special presses. They are produced, examined, and packaged using extreme quality control. It is very unusual to find major proof errors. A few broadstrikes, off-centers, double strikes in collars and off-metals have been known to be found in sealed proof sets. Proof errors are aggressively sought after by many error collectors.

A very small group of Proof errors recently came from a collection that was auctioned by the State of California. The U.S. Secret Service inspected and released this collection to the State of California determining that it was legal to own. The State of California then auctioned the collection and it has been dispersed since the sale.

Mint Error News Price Guide

Broadstrikes

A broadstruck error occurs when a coin is struck without the collar to form the rim and edge that is part of the shape of the coin. Coins can be broadstruck on either type one or type two planchets. When a coin is broadstruck the blank being fed into the collar will spread and distort outward as it is being struck because the collar isn't in the correct position to retain it.

Partial Collars

Partial collar strikes occur when there is a malfunction of the striking press. This causes the collar to be in an incorrect position. The lower die (usually the reverse die) is recessed in the collar. This allows the coin which is going to be struck to have a formed rim. After a coin is struck the lower die raises upwards, pushing the struck coin out of the collar and ejecting it. If a blank entering the collar is not properly seated, it will only have partial reeding as it is struck. The edge of this coin will have a partial reeding and a partial blank surface area. Recently, the Mint has installed new machinery where either die can be installed in either position.

Mint Error News Price Guide

Uniface Strikes

Uniface coins occur when there have been two blank planchets in the press at the same time. The other blank will obstruct the die on either the obverse or reverse side, which will prevent it from having that design on the coin. There are many different variations involving uniface errors. In addition to having a 100% blank obverse or reverse, a coin can be struck off-center, with a blank planchet in the collar which will obstruct one side of the off-center. There are also mated pairs which have a combination of multiple errors which can include a side which is uniface. Finally, there are uniface strikes due to a die cap which adhered to the die, forming itself in the shape of a die and striking blank planchets.

Bonded Coins

Bonded coins occur when the feeder system, which supplies blank planchets to the coin press, malfunctions and jams. When this occurs, a struck coin is not properly ejected and another planchet is fed into the collar and is struck. This struck coin will land on top of the previously unejected strike. These coins will then crush and bond together. This may occur many times as more coins bond.

Coins Struck on Feeder Finger Tips

After a recent tour of the U.S. Mint at Philadelphia, it was discovered that the minting process had changed to some degree. One of the changes was that “feeder fingers” were used during the striking of all denominations of U.S. coins. Prior to this tour, U.S. coins that were struck on feeder finger tips were authenticated and described as being struck on aluminum scrap. Coins from all modern denominations have been discovered that were struck on the tips of these feeder fingers.

Struck Fragments

The blanking press takes the coils of metal strips and punches blanks out of it, ejecting the webbing at the other end. The webbing is cut into small scrap pieces to be melted and recycled. Occasionally a scrap piece will be mixed with the blank planchets and struck by the dies. Struck fragments are rare in the larger denominations. These can be uniface or die struck both sides and are very rare on type coins.

Denomination	Uniface	Die Struck Both Sides

Mint Error News Price Guide

Mated Pairs

Mated pairs involve two individual coins with different errors that were struck together at the same time. Mated pair error combinations can be found in most error types and come in many shapes and sizes. Mated pairs can be overlapped when one of the coins is struck off-center on top of another coin. Another type involves a brockage where a struck coin was perfectly centered on a blank and restruck. Some mated pairs involve a die cap where the cap and brockage coin are discovered together, but this is a scarce find.

The rarest mated pair type involves two die caps (obverse and reverse) where both dies were capped at the same time and both die caps are mated. This last type is extremely rare and there are only a few known examples of mated pairs involving an

obverse die cap and reverse die cap. There are several of these mated pairs known on Kennedy Halves including two dated 1976, which is the Bicentennial year. One of the most spectacular mated pairs involve two Barber Dimes, an obverse die cap mated to a reverse die cap and are unique.

Mated pairs can also involve an off-metal where a smaller blank planchet or smaller struck coin was struck on top of a larger coin. This type is extremely rare. The most spectacular pair known is a double struck Franklin Half which was mated to a Lincoln Cent. The Lincoln Cent blank was on top of the obverse of the struck Franklin Half. This pair was then struck together. It is unique.

Transitional Errors

A transitional error occurs when a coin is struck on a planchet from a previous year with different metal composition. The most famous transitional is a 1943 copper cent struck on a 1942 copper blank. 1943 cents were struck in steel because of the copper shortage during World War II. Other famous transitionals include 1965 coinage struck in silver instead of clad.

There are also transitionals struck on blanks for the next year. An example is 1964 coinage in clad instead of silver. Most recently, transitionals were discovered involving the SBA and Sacagawea Dollars of 1999 and 2000. There are eight known 1999 SBA Dollars struck on the brass planchet for the 2000 Sacagawea Dollar, and four known 2000 Sacagawea Dollars struck on a clad planchet for the 1999 SBA Dollar.

Denomination	Off-Metal Planchet	Circulated	AU	Unc	Choice Unc – Gem

Mint Error News Price Guide

U.S. Gold Errors

Major mint errors on U.S. Gold coins are the most prized category of all mint errors. Gold errors are very rare and a few have traded in the \$75,000 to \$100,000 range. Even a broadstruck U.S. Gold coin can easily sell for \$15,000 to \$30,000 compared to a broadstruck Cent, Nickel, Dime or Quarter which all sell for well under \$10. Many serious collectors of Gold Errors have to wait patiently for months and sometimes even years to acquire that one special piece for their collection.

The prices listed here are for common dates in AU-Unc. Better dates and errors that are in gem condition are worth considerably more.

Denomination	Partial Collar	Broadstruck	Clipped Planchet	3% - 5% Off-Center	10% - 15% Off-Center

Mint Error News Price Guide

Indents

An indent error occurs when two blanks are fed inadvertently into the same collar, with one blank partly overlaying on top of the other. When the hammer die strikes this combination, the upper blank will be forced into the lower blank, creating a depression which is shaped similar to the upper blank. A scarce type of indent occurs when a blank intended for one denomination lands on top of a blank from a different denomination.

Die Caps

Die caps are caused when a struck coin sticks to the upper hammer die. Once the coin is struck to the die face, the reverse of the struck coin becomes the new die face. When the next blank is fed into the collar and the strike occurs, the reverse design of the adhered struck coin impresses itself into the new blank. This struck coin is a brockage strike. The coin that adhered to the upper die is known as a die cap. This process repeats itself as more coins are struck by the cap. The greater the number of strikes, the higher the cap metal will be pushed around the upper die shaft. Eventually, the cap brakes away from the die in the shape of a thimble.

Die Adjustment Strikes

Die adjustment strikes are also known as die trials. This error occurs when a coin is struck from the press with very little pressure. When the press is being set up and adjusted, extremely weak strikes occur as the strike pressure reaches its optimum level. These die trials are destroyed after being struck and are rarely found in circulation.

Double Denominations

One of the most expensive, popular, and desired types of errors are the double denominations. This error happens when a coin is struck on a previously struck coin of a smaller denomination. Examples are a cent on a struck dime, and a nickel on a struck cent. The most dramatic are those with considerable design visible from the original strike. There are a few known double denominations with different dates.

Brockages

A brockage error can only occur when there are two coins involved. One of the coins involved will always be a struck coin which has not ejected properly. That struck coin will find its way back between the dies and will be struck next to a blank planchet which was fed into the collar. The image of that first struck coin will be impressed into that side of the blank planchet. The result will be a second coin which has images of the first coin impressed into it. Those images will be pressed into the coin and the image will be in reverse. This incuse sunken image is known as a brockage.

Double & Multiple Strikes

When a blank planchet is struck by the dies, the normal procedure is for the feeders to eject the struck coin out of the collar and into a chute. If there is a malfunction and the struck coin isn't ejected, it may receive a second or third strike by the dies. A multiple struck coin can happen in many ways and have many combinations of errors.

Off-Center Strikes

Off-center coins are one of the most common and best known types of errors. This happens when a blank which is supposed to be fed into the press, lands in the collar improperly. When this occurs only part of the blank is between the upper and lower dies. When the dies strike the blank, only that part will be struck with a design.

Off-Metals

Off-metal and wrong planchet errors occur when a correctly made blank from one denomination is accidentally fed into a press for another denomination. Examples are a nickel struck on a cent planchet and a cent struck on a dime planchet. The coin struck on an incorrect blank will weigh exactly what the denomination of that blank would have been. An even more dramatic wrong planchet error is a coin struck on a previously struck coin of a different metal.

2004 Malaysian 10 Sen Die Cap Mated Pair

By Fred Weinberg (fredweinberg.com)

Coin #1 is a Deep Die Cap and mated to Coin #2, which has an expanded uniface obverse. First seen like this!

Mated Pair of U.S. \$1 Silver Eagles Certified by PCGS

This is a spectacular One Dollar Silver Eagle mated pair struck at the Philadelphia Mint in 1986. It was incredible that both pieces of this mated pair were released together and still survived. A 3M sanding disk adhered to the die and was struck into the reverse of the blank planchet. It has the same diameter as the struck coin, fits very snug and locks into place.

There are five or six U.S. Silver Eagles known to exist with either the obverse or reverse 100% struck through

a 3M sanding disk. Until this actual sanding disc was discovered struck by the reverse die and mated to this struck-through coin, it had not been determined what these Silver Eagles had been struck-through.

The strike on the sanding disk is incredibly sharp and has a surprising amount of detail considering that it is not metal. This dramatic mated pair is one of the most unusual major mint errors ever discovered.

Here is a letter from the Department of the Treasury relating to the discovery of a new type of mint error. In 1986 several Silver American Eagle coins were struck on emery discs and a few others were struck through the emery disc. PCGS has certified two of these mated sets. This letter is in response to the discovery coin twenty years ago.

DEPARTMENT OF THE TREASURY
UNITED STATES MINT
WASHINGTON, D.C. 20220
February 18, 1987

Ms. Marilyn Van Allen
Collectors' Clearinghouse
Coin World
P. O. Box 150
Sidney, Ohio 45367

Dear Ms. Van Allen:

In your January 20, 1987 letter you enclosed an unusual 1986 Silver American Eagle coin, your article about it, and a request for our authentication and explanation.

The coin is a genuine U.S. 1986 silver bullion dollar coin, struck and issued in error.

Normal production of these coins involves texturing of the dies, initially by wire brushing, and periodically by either removing and rebrushing or by a redressing in the coin press. Redressing is done by striking coins through circles of 400 grit emery paper. For an obverse die, such redressing involves placing an emery circle above the blank with its grit facing up, striking the coin, peeling the paper off the coin, discarding the paper, and condemning the coin. For a reverse die, the paper is placed under the blank with its grit facing down.

The coin you sent was struck on its reverse through an emery circle which had previously been used on the obverse. It did not have its emery peeled off, nor was the coin condemned.

We believe that the heavy overtime schedule required to meet the extraordinary year-end demand for Eagle coins contributed to this error. However, we are also investigating alternatives to the current die redressing technology to remove the possibility of any future recurrence.

Your coin is enclosed, registered mail.

Sincerely,

A handwritten signature in dark ink, appearing to read "George Hunter", is written over the typed name.

George Hunter, Ph.D.
Assistant Director
for Technology

Enclosure

The Milt Cohen Collection

Editor's Note: Natalie Halpern was a well known mint error dealer many years ago. She sold the Mint Cohen collection which included many unique and finest known mint errors. It is fascinating to not only view all of the rarities that were in his collection, but also to remember where some of them have gone over the years.

The Milt Cohen Collection

THE MILT COHEN COLLECTION

Welcome to the sale of the Milt Cohen Collection. Included is an extensive offering of off-centers by type, off-metals by type, gold and washer coin errors, plus some of the most amazing transitionals and transitional errors. Also included is a listing of the Cohen Cent on Dime Collection, though not for sale at this time.

We have the pleasure of offering serious collectors a major opportunity at obtaining some of the most important errors ever assembled. The collection was over 20 years in the making and many of the coins have very interesting pedigrees which can be obtained from Milt in person at the time of the sale.

In addition to being a devoted collector, Milt Cohen has researched his vast collection over the years and his notations of rarity are given with the serious consideration only a devoted collector/researcher can offer. The comments regarding rarity are based on actual numbers of similar errors known, plus the combined rarity of date, percentage of off-center and grade. The scale is similar to the Sheldon scale:

UNIQUE - Only one known
EXCESSIVELY RARE - 2-3 known
EXTREMELY RARE - 4-6 known
VERY RARE - 7-9 known
RARE - 10-12 known
VERY SCARCE - 13-30 known
SCARCE - 31-75 known

The sale of the Cohen Collection is being conducted in stages with Phase I taking place at the 1981 N.E.C.A. Errorama in Thousand Oaks, California. Phase II will be held at the 1981 A.N.A. Convention in New Orleans, Louisiana, and Phase III is planned for the Grand Central Convention in New York in the fall of 1981.

Due to the nature of the sale, appointments will be necessary and are being scheduled through Natalie Halpern. However, the actual sale will be conducted by Milt Cohen.

We hope you enjoy this catalog and look forward to seeing you if you choose to attend this exciting sale.

The Milt Cohen Collection

OFF-CENTERS HALF CENTS

#1.
1795 Liberty cap. F/VF. Possibly unique.

#2.
1803 draped bust. VF.

#3.
1829 Classic head. AU/UNC.
Rare.

LARGE CENTS WREATH

#4.
1793 flowing hair. Unique!

#5.
1795 Liberty cap. Good.

#6.
1803 draped bust, choice XF.
Mostly original red. Extremely
rare for the type.

#7.
1813 Classic head, VF+. Very
scarce.

The Milt Cohen Collection

LARGE CENTS

#8.
1817 Matron head, VF#. Very scarce.

#9.
1848 Mature head, choice XF with clip at K-12. Scarce.

SMALL CENTS

#10.
1858 Flying Eagle, UNC with original lustre. Very rare.

#11.
1859 Copper-nickel no shield, gem BU. One year type. Excessively rare.

#12.
1863 Copper-nickel, gem BU. Rare.

#13.
1903 Bronze, UNC.

#14.
(1943) steel. BU. Rare.

TWO CENTS

#15.
1864 Two cent piece, VF, cleaned long ago. Very rare this far off-center.

The Milt Cohen Collection

THREE CENT PIECES

#16.
N.D. 3¢ silver, Type I. BU. Excessively rare.

#17.
1856 3¢ silver, Type II. XF.

#18.
1865 3¢ nickel, BU. Rare/Very Rare.

NICKELS

#19.
1866 Rays shield, VG/F. Excessively rare.

#20.
N.D. No rays shield, BU. Excessively rare.

#21.
1897 Liberty. VF#.

#22.
1913 Buffalo, Type I, BU. Planchet split on off-center portion. Extremely rare.

#23.
1919 Buffalo, Type II. BU. Scarce.

#24.
N.D. P-mint Warnickel, BU. Extremely rare.

The Milt Cohen Collection

HALF DIMES

#25.
1803 Draped bust, VG. Excessively rare for the type.

#26.
N.D. Stars obverse, AU/UNC. Extremely rare.

#27.
1853 arrows, AU. Extremely rare.

#28.
1858 No arrows, VG.

#29.
1861 legend obverse, AU. Rare

DIMES

#30.
1821 capped bust (large size), vf+. Possibly unique.

#31.
1833 capped bust (reduced size), fine. Very rare.

#32.
1854-O Arrows, VG.

#33.
1857 no arrows, XF.

#34.
N.D. legend obverse, UNC. Scarce.

#35.
N.D. Barber dime, choice XF. Extremely rare.

#36.
1920 Mercury dime, gem BU. Full bands. Very scarce.

#37.
1953 Roosevelt dime, BU.

The Milt Cohen Collection

TWENTY CENT PIECE

#38.
1875 twenty cent piece, gem BU. Excessively rare.

QUARTERS

#39.
1820 capped bust (large size), G/VG. Excessively rare.

#40.
1838 capped bust (reduced size), Fine. Extremely rare.

#41.
1853-O arrows, good.

#42.
1857 no motto, choice AU. Split on reverse blank portion. Very rare.

#43.
1874 arrows, VF/XF.

#44.
N.D. with motto, F/VF. Very scarce.

The Milt Cohen Collection

QUARTERS

#45.
1901 Barber, UNC. Rare.

#46.
1917-S Standing Liberty, Type I, VG. Probably unique.

#47.
N.D. Standing Liberty, Type II, Gem BU. Rare.

#48.
1959 Washington, BU.

#49.
1965 Washington, BU

#50.
Bicentennial Washington, BU.

HALVES

#51.
1806 Draped bust, VF. Scarce.

#52.
1811 Capped bust, Choice AU. Excessively rare.

The Milt Cohen Collection

HALVES

#53.
1875-S No arrows, UNC. Extremely rare.

#54.
N.D. Barber, Gem BU. Excessively rare.

#55.
N.D. Walking Liberty, BU. Partially struck through a blank on reverse. Excessively rare.

#56.
N.D. Franklin, BU. Uniface reverse. Extremely rare.

The Milt Cohen Collection

HALVES

#57.
1964-D 90% silver Kennedy.
BU. Excessively rare.

#58.
1968-D 40% silver Kennedy.
BU. (Line in photo is toning
streak).

#59.
1971-D Clad Kennedy. BU.

#60.
Bicentennial Kennedy.
BU.

DOLLARS

#61.
1802 Bust, F/VF. Very rare.

The Milt Cohen Collection

DOLLARS

#62.
N.D. Morgan, major off-center, XF/AU.

#63.
1922 Peace dollar, Gem BU. Excessively rare as a type, this is the furthest off-center Peace dollar known.

#64.
1971-D Clad Eisenhower, BU.

The Milt Cohen Collection

GOLD ERRORS

#1.
1853 \$1.00 gold piece, Liberty head, UNC.

#2.
1856 \$1.00 gold piece, Indian head, XF.

#3.
1912 \$2.00 1/2 gold, Indian head, UNC.

TOM ELDER \$1.00 GOLD SIZE TOKENS

#4.
N.D. Gold off-center, BU.

#5.
1927 Gold double struck, Gem BU.

#6.
1927 Gold off-center, Gem BU.

WASHER COINS

Washers are integral parts of the mechanics in the mint as in any factory. As "Murphy's Law" would predict, these washers can fall prey to the coining presses, although it is a very rare occurrence. And while not struck on actual coinage metal, washer coins are a fascinating adjunct to an off-metal type set.

#1.
1968-S cent on steel washer (magnetic).

#2.
1967 nickel on steel washer (magnetic).

#3.
1969 quarter on steel washer (magnetic).

The Milt Cohen Collection

SILVER INDIAN

#1.
1909 Indian cent on
dime, gem BU.

SILVER WHEAT

#2.
1949D cent on dime.
Gem BU.

SILVER MEMORIAL

#3.
1964D cent on dime.
BU.

CLAD MEMORIAL

#4.
1970D cent on dime.
BU.

#5.
1865 two cent piece on Indian cent, gem BU
with prooflike surfaces. Extremely rare.

#6.
1871 two cent piece on shield nickel, VF±
Probably unique.

#7.
1883 nickel-copper Liberty nickel on Indian
cent, Gem BU, semiprooflike surfaces. Unique
one year type.

#8.
1892 WC Liberty nickel on cent, AU/UNC.

#9.
1921 Buffalo nickel on cent, fully struck, gem
BU.

#10.
1943-S Warnickel on steel cent, BU. Full date,
sattiny surfaces. Very rare.

#11.
N.D. Buffalo nickel on dime, BU.
Excessively rare.

#12.
1941 Jefferson on dime, UNC.
Earliest date known.

#13.
1942-S Warnickel on dime,
BU.

The Milt Cohen Collection

OFF-METALS

#14.
1903 Barber dime on Venezuelan 1/4 Bolivar, silver, BU. Excessively rare.

#15.
1936 Mercury dime on Venezuelan 1/4 Bolivar, silver, BU. Very rare.

#16.
1946 Roosevelt dime on Venezuelan 1/4 Bolivar, silver, BU. Excessively rare.

#17.
1956 Roosevelt dime on a struck copper Honduras one centavo, BU. Strong detail on reverse. Only dime on copper known, and a double denomination! Unique.

#18.
1970 Roosevelt dime on aluminum Philippine one centimo, BU. Rare.

#19.
1955 Washington quarter on cent, choice AU/UNC.

#20.
1967 quarter on struck cent, gem BU. Lots of detail.

#21.
Bicentennial quarter on cent, XF+. Extremely rare.

#22.
1939 quarter on nickel, gem BU. Earliest date known.

#23.
1944 quarter on Warnickel, UNC. Unique.

#24.
1967 quarter on struck nickel, flipover, BU.

#25.
Bicentennial quarter on nickel, BU.

#26.
1946 quarter on dime, BU. Earliest date known.

#27.
1963 quarter on struck dime, BU. Excessively rare.

#28.
1965 quarter on dime, BU.

The Milt Cohen Collection

OFF-METALS

#29.

N.D. Walking Liberty half on a steel cent, off-center. Positively unique! Overall, probably the most desirable off-metal, off-center known.

#30.

1954 Franklin on cent, brockage on reverse. BU. Excessively rare.

#31.

N.D. Kennedy on cent. BU.

#32.

1973S Kennedy on cent. Proof. Unique.

#33.

N.D. Walking Liberty on nickel, BU. Possibly unique.

#34.

1960-D Franklin on struck nickel (flipover), BU. Unique.

#35.

1964 Kennedy on nickel, BU.

#36.

1973-S Kennedy on nickel, proof. Unique.

#37.

Bicentennial half on nickel, gem BU.

The Milt Cohen Collection

OFF-METALS

#38.
N.D. Franklin on dime, BU.

#39.
N.D. Kennedy on clad dime,
BU.

#40.
1951-D Franklin on quarter,
BU. Probably earliest date
known.

#41.
1964-D Kennedy on quarter,
gem BU.

#42.
1968-D Kennedy on quarter,
gem BU.

#43.
Bicentennial Kennedy on quar-
ter, BU.

Additional reports of unlisted dates and mintmarks are solicited. Natalie Halpern will be conducting further research in order to provide the hobby with as complete a listing as possible. In most cases, to be considered a "verified" report it will be necessary to send the coin for photographing and weighing. Ms. Halpern will pay return postage and your name will be included (with your approval) in the updated listing to be published at a later date. All cents on dimes, including those listed, are solicited for purchase as well. Please write with a description first. Direct all inquiries to:

Rare Kennedy Mated Sets Surface After Forty Years

Editor's Note: These very rare mated silver Kennedy Halves came out of an estate from Philadelphia. These were unknown until this small group was discovered. They are very rare since the 1964 Kennedy Half was only struck for one year.

Bonded Two Piece Silver Kennedy Cap

This spectacular BONDED 2 piece cap is the only one known in the SILVER Kennedy series. A 1/3 inch high off-center obverse cap bonded to a multistruck reverse cap. This unique mint error was recently purchased from an old estate. Until this recent find, there were no known examples of 2 BONDED Kennedy Halves. This piece includes a letter of authentication from Fred Weinberg.

Fred Weinberg & Co.

Member: Professional Numismatists Guild; Professional Coin Grading Service; Industry Council for Tangible Assets.

To whom it may concern,

December 18, 2000

This 1964-P 90% Silver 2 pc. Bonded Cap Kennedy Half Dollar set is the only Bonded set that I am aware of. The bottom coin is multi-struck and together this Bonded set is almost 1/3" high. It will not fit into a P.C.G.S. holder.

This set has come on the market for the first time since 1964, and is probably unique.

Fred Weinberg
FW: kg

1964 Kennedy Half Dollar Die Cap Mated Pair

This is one of two known die cap pairs for the 1964 90% Silver Kennedy Half Dollars. The die cap is very deep and barely fits in the PCGS holder.

1964 Kennedy Half Dollar Die Cap Mated Pair

This is one of two known die cap pairs for the 1964 90% Silver Kennedy Half Dollars. Both of these die caps are so deep that they do not fit in a PCGS holder.

Sacagawea Dollars with an Experimental Finish

Editor's Note: The following article has not previously been published in Mint Error News. It is being included in this issue of Mint Error News and it was originally printed on Mike Byers' website (mikebyers.com). Mike Byers discovered the original hoard of these Sacagawea Dollars with experimental finishes and sold out when they were being offered on his website. Subsequently another small group has surfaced and was purchased by Fred Weinberg (fredweinberg.com). This latest group was certified by PCGS and are being offered on Fred Weinberg's website. In addition to the reprinted article on the original discovery there are photos from Fred Weinberg of one of his experimental rinses certified by PCGS.

We are very excited to announce that we have just purchased a small group of 2001-P Sacagawea Dollars that were struck with an experimental rinse by the U.S. Mint in Philadelphia.

This experimental rinse/finish attracted much attention when it was discovered on 2001-P Sacagawea Dollars. Coin World attempted to contact the Mint to get the

details on this experimental process, but Mint officials refused to comment. The June 25th Issue has a detailed article on this discovery.

This discovery is also featured in Numismatic News in their June 5th Issue. They were the first to report on these experimental Sacagawea Dollars. CoinFacts.com, one of most popular online coin references, is featuring the Experimental Sacagawea Dollar as their "Coin of the Week".

As everyone knows, the year 2000 Sacagawea Dollars, which was the first year of issue, were plagued with spots, discoloration, and tarnish, even when pulled from bags or rolls from the bank.

The Sacagawea Dollar has an alloy layer on each side of the copper core. These two layers are manganese bronze, a composition the U.S. Mint has not used since Wartime Nickels were being struck in the early 1940's. The Mint experienced many problems with the Wartime composition, which peeled, laminated and was not mixed properly.

Sacagawea Dollars with an Experimental Finish

A similar situation occurred in 1999, when the Mint was experimenting with the composition, layers and finish for the alloy to be used for the Sacagawea Dollar. The end result was an overall composition of 88.5% copper, 6% zinc, 3.5% magnesium and 2% nickel.

There have been several articles in *Coin World* in the last year which have described in detail the problems that the U.S. Mint was having with the composition and finish of the new Sacagawea Dollar. In one of the recent articles, Michael Fahey of ANACS describes the finishing process for the burnished Sacagawea Dollars, explaining that the rinse was “used to remove any surface residue from the coins, and to prevent spotting.”

Recently on the Discovery Channel, there was a program exclusively devoted to the U.S. Mint and the production of United States coinage. In this film, viewers got a close up look at the entire minting process. This program included an interview with the Mint Director regarding the new Sacagawea Dollars. It also elaborated on the tests and experiments that were conducted by the Mint on this new alloy for the Sacagawea Dollar. Small quantities of blank planchets and struck coins were subjected to chemical testing, exposure to artificial sweat, mechanical wear and tear, artificial wear and electrical testing.

Knowing that the Sacagawea Dollar in its first year of production was plagued with these problems, the U.S. Mint continued to experiment and conduct tests on the surface with chemicals and rinses to ensure that future years of production would not have similar problems. This small hoard was discovered through the normal distribution channels by an alert employee/collector who instantly noticed that these were different in color, appearance and texture. This individual contacted David Hendrickson of Silver Towne, one of the largest coin dealers in the Mid-West, and subsequently sold these discovery pieces.

Silver Towne immediately contacted our firm, since we specialize in Major Mint Errors and are well known throughout the industry. This group was then

authenticated and certified by SEGGS (Sovereign Entities Grading Service) as having an Experimental Rinse. SEGGS is one of the leading certification and grading services. One of their specialties is Major Mint Errors. Larry Briggs, the owner of SEGGS, is a highly respected numismatist. After an unsuccessful attempt at reaching the Mint for comment, Larry Briggs consulted with several Mint Error specialists and determined that “these coins were the result of an experimental rinse or finish.”

Another world-renowned Mint Error expert, Fred Weinberg, has examined some of these experimental pieces and agreed that they have “an experimental rinse or finish.” This rinse/finish was applied by the United States Mint to hopefully eliminate the spots and discoloration.

These Experimental Sacagawea Dollars are being sold exclusively by Michael S. Byers of Byers Numismatic Corp. and are available only through www.byersnc.com, the company’s website. These authenticated and certified experimental pieces have been graded Mint State 64 to Mint State 67.

This experimental dollar belongs in every collection of Mint Errors, Patterns and/or Dollars. It certainly belongs with other Sacagawea Dollars that were specially struck and/or have experimental/different finishes.

On November 18, 2000 the United States Mint struck approximately six hundred Sacagawea Dollars on a special press for dignitaries, collectors, and other invited guests. These special presentation strikes are referred to as VIP strikings and have sold on eBay for \$600.

Glenna Goodacre, who was the designer of the obverse for this new dollar, was paid by the U.S. Mint in the form of five thousand Burnished Sacagawea Dollars. These Burnished specimens were certified by ICG and sell on eBay in the \$500-\$600 range. ICG certified all five thousand of these Burnished Dollars with this special surface.

Sacagawea Dollars with an Experimental Finish

Quantity Struck: 600
Selling Around: \$600 Raw

Burnished

Quantity Struck: 5000
Selling Around: \$500-\$600
Certified with No Grade

Experimental Finish

Quantity Struck: Limited Edition
Certified MS 64 to MS 67

This group of several hundred Sacagawea Dollars have been authenticated and certified by SEGS as a limited edition, with an experimental rinse/finish. These are available exclusively through Byers Numismatic Corp.

This discovery is significant because it represents a third type of special Sacagawea Dollars struck by the U.S. Mint. These are priced at just a couple hundred dollars and compare favorably in rarity to the VIP and Burnished Sacagawea Dollars.

These experimental rinse Sacagawea Dollars are available certified by PCGS from fredweinberg.com.

A Study of World Mis-Struck Coins

by Bill Snyder - worlderrors.com

Editor's Note: This is the fifth in a series of charts to be published in Mint Error News Magazine which were compiled by Bill Snyder of worlderrors.com. He undertook a study to painstakingly research and compile a list of known errors from major world countries. The chart below covers Australia striking errors from 1944 to 1995.

Bill states that "this study will determine which types of mis-strikes were common or rare, by country and time period. The study was limited to major striking errors such as double strikes, off-centers, brockages, etc."

Country	Type of Error	Date	Amount	Denom	Specifics
Australia	Wrong Planchet	1944S	1	Florin	Struck on a one shilling planchet.
Australia	Off Center	1944S	3	Pence	"10% o/c"
Australia	Off Center	1944S	3	Pence	Part of a 7 piece lot of VF to EF o/c's.
Australia	Off Center	1944S	6	Pence	10% o/c. Sold with a similar 1946 6d.
Australia	Off Center	1944Y.	1	Penny	"2mm o/c"
Australia	Off Center	1944Y.	1	Penny	"2mm o/c." Lot #1077
Australia	Off Center	1945	1	Penny	"3mm o/c"
Australia	Double Strike	1945	1	Penny	2nd strike was rotated 60° CW. The King looks very strange.
Australia	Off Center	1945	6	Pence	10% o/c K-11.
Australia	Brockage-O	1945 ca	1/2	Penny	There is a vertical depression running down from the King's incuse chin.
Australia	Off Center	1945-1951	1	various	10 pieces, 1947, 51 1/2d; 1943,44(DS) d; 1948 3d; 1945 6d; and
Australia	Off Center	1945-P	1	Penny	"Some mint red".
Australia	Double Strike	1945Y.	1	Penny	"Double Struck at 180 degrees."

Dealer in Major Mint Error Coins & Currency

fredweinberg.com

BUYING MAJOR ERROR COINS & CURRENCY

If you have a single major mint error coin, either a recent issue or an older type coin, or 1,000 Off-Center Cents, please contact us. We stock over 60,000 Major Mint Error Coins and constantly need to purchase Major Error Coins for our clientele (please note that we do not deal in or buy Die Varieties, Damaged Coins, Doubled Dies, Filled Dies, or Die Cracks).

We do buy Major Mint Errors - such as Off-Center, Off-Metals, Double Strikes, Clad Layers missing, Die Caps, Double Denomination, etc.

Because of the many differences in each Error Coin we request that you send scans of your coin(s) to us for our examination and firm offer.

ERROR WORLD

Join the *hottest*
Error Coin Club on the Net!

e r r o r w o r l d c l u b . o r g

The Error World on-line coin club exists for the purpose of advancing the knowledge and the field of error coin collecting.

Error World is dedicated to the promotion, discussion and dissemination of facts and ideas about error coinage, both domestic and world-wide.

Error World exists as a vehicle to bring collectors of both foreign and domestic error coinage together in a professional and relaxed atmosphere where they can exchange information, display photos and engage in lively debate about error coinage.

Error World is a non-profit organization with all revenues being put back into the club to provide improved services to the members of the club.

Error World will, from time to time, accept contributions from designated Patrons in the form of contest prizes, and/or cash to be used to defray club expenses.

Error World will, from time to time, attempt to obtain sponsors from the numismatic field who will bring price saving offers to Error World members.

Error Coin Information Exchange

The Error Coin Information Exchange (ECIE) is a freewheeling forum dedicated to the study of error coins and varieties. Founded and hosted by veteran writer and researcher Mike Diamond, it is a great place to visit, whether you're an established collector or a novice. ECIE is not flashy and doesn't waste your time with a message board clogged with idle chit-chat. It simply provides the best information on error coins available on the web. Here you can read about late-breaking developments; find out about the newest discoveries; listen or participate in spirited debates about how error coins are produced; test your skills with periodic quizzes and brain-teasers. ECIE proudly maintains an atmosphere of skeptical inquiry. Here, no claim goes unchallenged and no theory goes untested. This is the best place to find out what kind of error you really have, how it was created, and the extent to which it is rare or unusual.

Policy Statement: By design, ECIE does not attempt to develop partnerships with dealers, grading services, or auction houses. It neither seeks, nor encourages, discounts, promotions, giveaways, or advertisements. To do otherwise would create a conflict of interest that could compromise the fierce independence and impartiality that distinguishes ECIE from all other on-line error coin clubs.

Frequently Asked Questions

What are Two-Headed/Two-Tailed Mint Errors?

There are approximately thirty genuine two-headed or two-tailed coins that have been authenticated by ANACS, PCGS and NGC. There are only four known “Two Tailed” U.S. coins: three Quarters and one Dime. One of the Quarters recently sold for \$80,000. Two world coins are Canadian Copper Cents that were struck with two reverse dies and authenticated by PCGS.

Frequently Asked Questions

What is a Dual Type mint error?

This is an exciting and fascinating new discovery. An unknown type of error until this discovery piece. It was first spotted in circulation by a woman sorting through her states quarters looking for errors. It has changed hands several times and finally found it's way to ANACS for certification. ANACS authenticated, certified, and graded it MS 64. It is a dual date (two different years, and also two different centuries, 2000/1999). It is also a dual state (Massachusetts and Georgia).
