MINT **ERROR** NEWSTM MAGAZINE

Bringing the latest mint error news to the collector. Also featuring Die Trials, Test Pieces, Numismatic Rarities, Currency Errors and Discoveries from the U.S. Mint & the BEP.

Mike Byers, Publisher & Editor, Welcomes You!

Welcome to Mint Error News Magazine, bringing the latest mint error news and information to the collector. This is our fifth year bringing you both a print magazine and an online PDF magazine. There are now over 575 articles, features, discoveries, news stories with mint error related info from the United States and around the World. Minterrornews.com has become the most popular and informative Internet resource for mint errors and is read by thousands of dealers and collectors.

Mint Error News was originally sponsored by Mike Byers and ANACS. Due to the popularity of mint errors and the magazine it is now sponsored by Mike Byers and several other mint error dealers including Allan Levy (alscoins.com) and Fred Weinberg (fredweinberg.com). Mike Byers is the Publisher and Editor of Mint Error News Magazine.

Off-Center Mint Error Sales

by Al Levy (alscoins.com)

Here are records of recent sales of off-center mint errors on eBay:

1. All coins were listed on eBay and closed from July 1, 2008 to September 30, 2008.
2. All lots had buyers. If the coins actually changed hands is unknown.
3. A picture accompanied each lot or it was not recognized.
4. Mislabelled items were ignored.
5. Some lots may have changed hands more than once.

6. "D" next to the date symbolizes that the coin had damage or was scratched.

7. "C" next to the date symbolizes that the coin was cleaned.

8. "B" next to the date symbolizes that the coin had damage and was cleaned.

9. If the date or mint mark was missing or partially visible, parentheses were used.

10. Postage/handling/insurance fees were ignored.

11. Major auctions were not listed.

Waffled Coin Sales

by Al Levy (alscoins.com)

WAFFLED COINS ARE THE MATERIAL DESTINED FOR RECYCLING BACK TO THE MANUFACTURER. CONDEMNED COIN BINS OR FLOOR SWEEPED MATERIAL COMPRISE OF THESE COINS. WAFFLED ERRORS BRING SUBSTANTIALLY HIGHER PRICES THAN ANY THAT SHOW NO ERROR. MANY OF THESE CENT THROUGH DOLLAR SLABBED WAFFLES ARE SHOWING UP AT THE MAJOR SHOWS AND EASILY TRADED.

HERE ARE RECORDS OF RECENT SALES ON EBAY FROM JULY 1, 2008 TO SEPTEMBER 30, 2008.

Buffalo Nickel “Speared Bison” & Wisconsin Quarter “Extra Leaves”

by Al Levy (alscoins.com)

AN IMPORTANT OBSERVATION ABOUT THE BUFFALO 5c “SPEARED BISON” & THE “WISCONSIN” 25c EXTRA LEAFS ARE EBAY ITEMS ONLY. DEALERS ARE STOCKING AND SELLING THESE AT SHOWS. PRICES HAVE TAKEN A MAJOR DOWNTURN. DEMAND HAS DEMINISHED GREATLY FOR THE SPEARED BISON. THE MAJORITY OF LISTED COINS REMAINED UNSOLD. EXTRA LEAFS HAVE GONE DOWN IN PRICE AS MORE ENTERED THE MARKET.

THE HIGH LEAF IS SCARCER THAN THE LOW LEAF. CHECK OUT THE SALES TOTALS AS BOTH VARIETIES ARE ABOUT THE SAME IN QUANTITIES. STILL VERY ACTIVELY TRADED.

END OF ROLL COINS. COLLECTORS NEED TO KNOW THAT THERE IS A MACHINE ON THE MARKET THAT WILL ALLOW ANYONE TO ROLL YOUR OWN COINS. IT IS A CRIMPING MACHINE TO BE USED WITH PRE-CRIMPED (SHOTGUN SHELL) STYLE WRAPPERS. BUYER BEWARE!!!

HERE ARE RECORDS OF RECENT SALES ON EBAY FROM JULY 1, 2008 TO SEPTEMBER 30, 2008.

NGC Certifies Proof John Q. Adams \$1 Struck On An Elliptical Planchet

by Mike Byers (mikebyers.com)

As of October 28, 2008 there are now three known proof U.S. coins struck on elliptical planchets. The first one discovered was the proof Utah Quarter which was featured on the cover of issue 23 of Mint Error News Magazine. Also discovered was a Proof Jefferson Presidential Dollar struck on an elliptical planchet. This discovery was included in issue 23. As incredible as it sounds, another proof Presidential Dollar was just discovered struck on an elliptical planchet and is featured on the cover of this issue.

1903 Louisiana Purchase Three-Piece Cardboard Die Trial Certified by NGC

Editor's Note: The following is from the Heritage auction listing:

These impressions in yellow cardboard measure 40 x 32 mm and show the obverse imprints of both the Jefferson and McKinley gold dollars with a slightly different pattern reverse. Andrew Pollock assigned two numbers for this piece, apparently believing the obverses were on one card and the reverses on another. They should have received only one number. There are two examples known, but the second is very different from this piece. The other contains both obverses

and six different reverses. That piece is permanently impounded in the Smithsonian. This is the only cardboard impression available to collectors.

Cardboard impressions are obviously rare but they date back to 1849 for the gold dollar. Other impressions include the 1851 three cent silver, and the Isabella quarter (obverse and reverse). The reason for the Isabella strikings is evident from the writing on the back of each card: They are first strikings from the new dies. One might easily assume the gold dollar and three

cent silver impressions were for the same purpose. The purpose here is somewhat more enigmatic. With a pattern reverse included on this card, it is likely this was produced before the first day of issue, as a first day of issue would surely have included the adopted reverse.

The cardboard has a rich, deep gold color, obviously meant to suggest the gold dollars that were soon to be struck. Deeply impressed. Regarding condition, this piece is essentially as struck with no scratches or surface problems worthy of mention.

From the Grading Room: 1973-S Dollar on a Copper-Nickel Planchet

By NGC (ngccoin.com)

Coins struck accidentally on planchets intended for other issues are known for quite a number of United States coin types, but they are rarely more spectacular than when occurring with dollar coins. This superb gem Eisenhower Dollar was struck at the San Francisco Mint for inclusion in the series of “blue pack” silver-clad dollars offered by the U. S. Mint at \$3 apiece from 1971 to 1974. At first glance it could almost pass for one of these silver-clad pieces, but inspection of its edge (made all the more easy through NGC’s unique EdgeView® holder) reveals the bright orange-red glow of a copper-nickel-clad planchet! This coin has the satiny texture typical of most silver-clad dollars and confirms that it was struck accidentally as part of that series.

The Denver Mint was assigned the role of preparing planchets for San Francisco’s production of the “blue” Ikes, but it was simultaneously making planchets of the copper-nickel-clad composition for its own press run of circulating coins. One of these ordinary planchets evidently found its way into a shipment of silver-clad planchets going to San Francisco and was struck and

packaged as a silver-clad issue. While this scenario describes how such an error could have occurred, it did not play out very often. This is the first report of a 1973-S Dollar struck on a copper-nickel planchet.

If that weren’t enough to excite collectors, this coin is also a doubled-die obverse variety! It is DDO-2 as listed and illustrated

in the book *CONECA Attribution Guide to Eisenhower Dollar Die Varieties* by James Wiles, Ph.D. This variety, previously known only in the normal silver-clad composition, is now confirmed on a copper-nickel-clad planchet intended for currency strikes. Collectors should check their “blue packs” for more new discoveries.

Certified But Not Graded:

Adjustment Strikes, Struck Thrus and Other Mint Errors

By NGC (ngccoin.com)

There are a few types of error coins that are eligible for NGC certification, but do not receive a grade. Learn more about what coins fall into this category of "MINT ERROR" and why.

There are a few types of error coins that are eligible for NGC certification but do not receive a grade. These coins are simply attributed as MINT ERROR on the certification label without any grade notation. This of course can be a source of questions, and the information here describes which coins fall into this category and why.

There are two basic categories of error coins that are certified by NGC but do not receive a grade. First, coins that, as a result of the error, lack enough detail to be graded. And, second, mint errors that were never struck by the dies. The reason that these mint errors cannot be graded is simple. Strike is a central component of grade and in the absence of this information a precise grade cannot be assigned.

The first category involves a few

basic error types: die adjustment strikes, split planchets, and struck thrus (although other errors can be included in this group).

Die adjustment strikes, as the name implies, are used to set the distance and the pressure of the dies to the planchet. In this stage of operation, there can be a noticeable lack of

detail to the coin. This lack of detail will prevent the coin from being eligible for grading, although it can be readily and accurately attributed. The edge of a die adjustment strike will be either weak or missing. This is an important difference from a struck thru which has full edge detail.

PHOTO #1: 1976-D half dollar, die adjustment strike, obverse. Low pressure did not allow for all of the details of the coin to be present.

Certified But Not Graded: Adjustment Strikes, Struck Thrus and Other Mint Errors

PHOTO #2: 1976-D half dollar, die adjustment strike, reverse.

PHOTO #3: 1976-D half dollar, die adjustment strike, edge view. Note that the reeding is either weak or missing from the edge of the coin.

Certified But Not Graded: Adjustment Strikes, Struck Thrus and Other Mint Errors

Coins struck on split planchets, when the split occurs before striking, can appear very similar to die adjustment strikes. They will exhibit a varying degree of weakness to the obverse and reverse depending on the thickness of the planchet. This weakness at times will prevent the coin from exhibiting enough detail to be graded. Unlike die adjustment strikes, the edge of the coin will be normally formed but will not be of the proper thickness.

PHOTO #4: 1956-D Lincoln Cent, struck on split planchet, obverse.

PHOTO #5: 1956-D Lincoln Cent, struck on split planchet, reverse.

Next we come to the struck thru errors. This group of errors is the most confusing, not only because of the grading issue, but also for attribution. Inherent in the manufacturing of coins are items like oil, grease and dirt. While oil and grease are necessary to allow machines to function properly. They become a detriment when they interfere with the minting process. A struck thru is quite simply when a foreign substance comes between die and planchet (coin blank) at time of striking.

The occurrence of struck thrus on circulating coinage is not rare, and minor examples are fairly common. Although these coins may not have been manufactured “perfectly,” the reality is that the mint does not hold these coins back from circulation.

Certified But Not Graded: Adjustment Strikes, Struck Thrus and Other Mint Errors

Most of these “minor flaws” will never be noticed by the general public and once circulated they become even less apparent. For this reason, NGC does not certify minor struck thrus as being mint errors if they are minor and therefore acceptable within mint tolerances. This is especially true with the statehood quarter series. NGC does not attribute coins where only one letter or number is obstructed, or when the obstruction is very weak (or partially struck thru which makes a small portion of the design visible but “blurry”). Obstructions that impede a large area or are significant will be noted. The location and size of the struck thru will determine whether there is enough detail to grade the coin, or if it will simply be attributed as a mint error without grade. Some of the most dramatic struck through mint errors are not graded.

PHOTO #6: The reverse of a Wheat Cent, struck thru grease, rendering some portion of the design blurry or obliterating it completely.

PHOTO #7: The obverse of a Proof 2005-S Jefferson Nickel, with a large struck thru of foreign material. The highly mirrored surface of proof coinage makes struck thrus of this type especially dramatic.

Certified But Not Graded: Adjustment Strikes, Struck Thrus and Other Mint Errors

PHOTO #8: Obverse of a State Quarter struck through grease. Note the resemblance to a die adjustment strike, except the reeded edge is full. Struck thrus can also affect just one side of a coin, while a die adjustment strike will show weakness on both.

PHOTO #9: Reverse of a Virginia State Quarter, struck thru.

Certified But Not Graded: Adjustment Strikes, Struck Thrus and Other Mint Errors

PHOTO #10: A 2006 Silver Eagle, most likely struck thru plastic die cap. The matte-like surface of this issue makes such errors especially dramatic.

Lastly, we come to blanks and planchets. Since these items never made it to the coining press and struck, they lack any detail. Therefore, blanks and planchets are attributed by NGC but never graded. For more information about coin blanks and planchets, see our article on planchet forming.

NGC Certifies Previously Unaccounted 1943-S Bronze Cent

By NGC (ngccoin.com)

A previously unrecorded 1943-S Lincoln cent, erroneously struck on a bronze planchet and found in circulation by a teenaged collector over a half century ago, was recently certified as AU-53 by Numismatic Guaranty Corporation. It had been acquired from the collector's heirs by Rare Coin Wholesalers of Dana Point, California.

"The coin was found in 1944 by Kenneth S. Wing Jr. of Long Beach, California who was assembling a set of Lincoln cents at the time," said Steven L. Contursi, President of Rare Coin Wholesalers. Wing became a prominent Southern California architect who co-designed the Long Beach Arena in the late 1950s. He passed away in 1996.

"My Father was an avid penny collector. His parents would get him rolls of pennies from the bank every few weeks, and he'd search through them. He found the 1943 (bronze) penny in Long Beach in 1944 when he was 14 years old, but I'm not sure if it was from pocket change or from a roll (of circulating cents) from the bank. He took it to a local dealer who offered him \$500 for it, but my Father said it wasn't for sale."

"The 1943 bronze Lincoln cent really transcends a wrong planchet error. Today, it's widely considered to be a classic twentieth century rarity, more kin to a transitional type, and now is collected as part of the regular series by devoted Lincoln cent enthusiasts," commented Dave

Camire, President of Numismatic Conservation Services and a mint error consultant to NGC. "This piece is particularly important because it's from San Francisco, a scarcer mint for the issue compared to better-known Philadelphia Mint specimens. This coin is also a re-

NGC Certifies Previously Unaccounted 1943-S Bronze Cent

cent discovery to the numismatic community,"Camire stated.

Common zinc-coated steel cents will stick to a magnet but the handful of known 1943-dated Lincoln cents mistakenly struck in bronze (in this case, an alloy of 95 percent copper and 5 percent tin and zinc) will not. The zinc-coated steel metallic composition was used in 1943 to conserve copper that was needed for U.S. efforts in World War II.

Accompanying the coin was an interesting file of correspondence dating back to 1946 as he tried to verify the coin's authenticity. In a letter to Wing dated August 20, 1946, Acting Director of the Mint Leland Howard wrote: "In reference to your letter of August 11th, there were no copper cents struck during the calendar year 1943 at any of the coinage Mints. Only the zinc coated steel cent was struck during that year."Today, though, the hob-

by is aware of more than a dozen 1943 bronze cents with at least one example known from each of the Mints producing Lincoln cents that year: Philadelphia, Denver and San Francisco.

Wing also wrote to Encino, California dealer Kosoff on October 3, 1958: "In 1948, on a trip to San Francisco, it (the coin) was shown to the Director of the mint and his 'private' opinion was that of au-

thenticity. In 1957, my Father was in Washington, DC, (sic) he attempted to have the Treasury Department examine it, however, they refused and referred him to the Smithsonian Institution.”

In his response dated October 8, 1958, Kosoff replied: “It would be of prime importance to determine, beyond any doubt, that your 1943-S Cent is a genuine one. This would require a number of tests and the outlay of considerable cash.”

Additional correspondence regarding the coin’s journey to Washington with Wing’s father is a June 18, 1957 letter from V. Clain-Stefanelli, Curator of the Division of Numismatics at the Smithsonian in which he wrote: “The authenticity of this piece is in my opinion beyond doubt. In fact, as you certainly recall, Mr. Mendel L. Peterson, Acting Head Curator of the Department of History, fully concurred in this opinion.”

Contursi said his recently-acquired 1943 bronze Lincoln cent is quite special for him. “It’s delightful and amazing there are still examples of great numismatic rarities to be ‘discovered’ and reported to the hobby. This is the first 1943 ‘copper penny’ I’ve ever owned!”

1836 Half Dollar With Doubled Edge Lettering

By NGC (ngccoin.com)

NGC's distinctive EdgeView™ holder gives collectors a unique view of lettered-edge coins, a feature of renewed interest in numismatics.

Initiation of the Presidential Dollar coin program in 2007 brought about a renewed interest in lettered-edge coins, as most collectors were not in the habit of examining a coin's "third side." Applying text to the edges of its coins was a common practice at the US Mint from 1793 through 1836, when the feature was discontinued in favor of reeded or plain edges, exclusively. It was revived solely for the Saint-Gaudens Double Eagle of 1907–33, until being utilized once again for the current dollar coin program.

Different methods have been used to apply this lettering, but during the Mint's early decades such edge lettering was performed prior to striking a coin's obverse and reverse. A Castaing machine was utilized to squeeze incuse lettering and symbols into the planchet's edge. This device consisted of two

1836 Half Dollar With Doubled Edge Lettering

straight-edge dies, facing one another, parallel and at a distance of just slightly less than the planchet's diameter. Each die carried one half of edge inscription in raised letters and symbols. One die was fixed in place, while the other moved when a crank was turned. The planchet was placed between the dies at one end of their parallel path, and the cranking action caused the planchet to rotate as it was squeezed between the moving and fixed-edge dies.

The geometric symbols that appeared on the edges of half dollars varied a bit between 1794 and 1836,

but the lettering portion remained the same, reading FIFTY CENTS OR HALF A DOLLAR. The lettering operation was often imperfect, with portions of the inscription overlapping or missing in places. Since this lettering operation also produced a raised rim, incomplete lettering resulted in slight edge bulges and missing portions of the rim. More common was when the edge lettering operation overlapped due to the planchet slipping or being passed through the edge dies more than once. Al Overton's reference book on early half dollars lists nearly six dozen comical variations

of overlapping and duplicated lettering.

The coin illustrated here, submitted by Christopher Mang of Chris' Coins, is boldly overlapped and doubled on its edge. An example of O-114, it is a relatively common die marriage that is spotted fairly easily by its clearly repunched seventh star. The doubled edge lettering is a feature that easily could have been overlooked. Instead, NGC's distinctive EdgeView™ holder permits collectors to enjoy this numismatic bonus as never before.

CONECA

The Combined Organizations of Numismatic Error Collectors of America

CONECA is a national numismatic organization devoted to the education of error and variety coin collectors. CONECA focuses on many error and variety specialties, including doubled dies, Repunched mintmarks, multiple errors, clips, double strikes, off-metals and off-centers -- just to name a few. It publishes an educational magazine, The Errorscope, which is printed and mailed to members bimonthly. CONECA offers a lending library, examination, listing and attribution services; it holds annual meetings at major conventions (referred to as Errorama) around the country, and offers auction services to its members. Please visit conecaonline.org and enjoy!

CONECA Variety Attribution Services

CONECA offers two attribution services. One service enables members and non-members to send their coins directly to an authorized CONECA attributer. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins attributed by a CONECA attributer and then graded and slabbed by ICG.

CONECA Error Examination Services

CONECA offers two examination services. One service enables members and non-members to send coins to an authorized CONECA examiner who will return an opinion of each coin's error classification. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins examined by a CONECA examiner and then graded and slabbed by ICG.

Washington Error Coins.com

Welcome to Washington Error Coins!

This website is dedicated to the 2007 Washington Dollar Coins released with missing edge lettering errors.

In 2007 the U.S. Mint began producing the first coin in the new Presidential Dollars series and a small number of coins were accidentally released without the usual lettering on the edge. This is a very RARE ERROR that quickly became known as the "Godless" coin because "In God We Trust" was part of the missing inscription on the edge of these coins.

Visit our website to read more about these rare "Godless" coins...

We were fortunate to secure a very limited number of Washington Error Coins. Remember there are not many of these phenomenal error coins available. This is a rare chance to own the most talked-about error coin in generations. But please don't wait -- YOU MUST ORDER NOW! Quantities are limited and prices will go up!

50 Year Old Crazy Kid

by Steve Simmons

Okay, I'll be the first one to admit it; I'm a new coin collector/hunter. I will also admit to becoming interested in collecting coins, like thousands of others, when the new state quarters were just starting to be released. I had contests with my friends to see who could be the first to get five of the latest state quarter release from both mints. I even cheated a little bit by e-mailing people I know on the east coast (I'm on the west coast) and asking them to send me coins with the "P" mint mark. Then I started hearing about the "error" coins being found and I went into a new frenzy looking closely at all my state quarters to find the one error coin in a million.

It didn't stop with the state quarters. Soon I was hearing about pennies, nickels and

even dimes with errors on them. I had to go through a huge amount of pennies I kept in a big clear plastic water bottle. Every time I bought something at the store, I had to look through the change they gave back to me. It got to the point where if something cost \$2.07 I would give them \$3.00 even if I had the .07 in my pocket because I wanted the change to look at. People started telling me I was just a crazy kid and I would never get rich if I depended on finding a one of a kind error that would sell for millions. I would come back with, "I'm just doing it for fun" and then ask if they could break a dollar. It doesn't seem to bother me that I have piles of coins laying all around the house. Piles of pennies, nickels, dimes and quarters I have searched through. Piles

of pennies, nickels, dimes and quarters I haven't searched through. Piles of the assorted coins I haven't sorted yet and piles of what I think might be error coins but haven't had anyone look at to certify them. Many nights, I'm told, "you need to go to bed and stop looking at all those %&#@ coins"!

So what if I'm a crazy kid with error coins on my brain. It's not like I'm doing drugs or abusing alcohol. Even if I found that one in a million error coin that would sell for millions I'm not sure I would sell it. There would be great satisfaction in knowing that "I'm the only one in the world who owns this coin!" So call me a crazy kid. That's okay, I can live with that. Did I mention I will be 50 years old in October?

Mint Error News Price Guide

- Entire Price Guide Updated 8/18/08 -

This price guide is brought to you by Mint Error News. It has been compiled by many of the top major mint error dealers.

This price guide is a guide. Prices fluctuate due to the date, grade, eye appeal and how dramatic the striking error is. Rarity is also a factor. The price is sometimes based on the rarity and grade of the type of coin as well as how rare the error is. The price can also vary depending on whether two collectors are bidding for the same rare major mint error. When purchasing a mint error, it is important to use multiple resources to determine value, as there are many mint errors that do not fit into one category.

Proof Errors

Proof coins are struck by technicians who hand feed the blanks into special presses. They are produced, examined, and packaged using extreme quality control. It is very unusual to find major proof errors. A few broadstrikes, off-centers, double strikes in collars and off-metals have been known to be found in sealed proof sets. Proof errors are aggressively sought after by many error collectors.

A very small group of Proof errors recently came from a collection that was auctioned by the State of California. The U.S. Secret Service inspected and released this collection to the State of California determining that it was legal to own. The State of California then auctioned the collection and it has been dispersed since the sale.

Broadstrikes

A broadstruck error occurs when a coin is struck without the collar to form the rim and edge that is part of the shape of the coin. Coins can be broadstruck on either type one or type two planchets. When a coin is broadstruck the blank being fed into the collar will spread and distort outward as it is being struck because the collar isn't in the correct position to retain it.

Partial Collars

Partial collar strikes occur when there is a malfunction of the striking press. This causes the collar to be in an incorrect position. The lower die (usually the reverse die) is recessed in the collar. This allows the coin which is going to be struck to have a formed rim. After a coin is struck the lower die raises upwards, pushing the struck coin out of the collar and ejecting it. If a blank entering the collar is not properly seated, it will only have partial reeding as it is struck. The edge of this coin will have a partial reeding and a partial blank surface area. Recently, the Mint has installed new machinery where either die can be installed in either position.

Uniface Strikes

Uniface coins occur when there have been two blank planchets in the press at the same time. The other blank will obstruct the die on either the obverse or reverse side, which will prevent it from having that design on the coin. There are many different variations involving uniface errors. In addition to having a 100% blank obverse or reverse, a coin can be struck off-center, with a blank planchet in the collar which will obstruct one side of the off-center. There are also mated pairs which have a combination of multiple errors which can include a side which is uniface. Finally, there are uniface strikes due to a die cap which adhered to the die, forming itself in the shape of a die and striking blank planchets.

Bonded Coins

Bonded coins occur when the feeder system, which supplies blank planchets to the coin press, malfunctions and jams. When this occurs, a struck coin is not properly ejected and another planchet is fed into the collar and is struck. This struck coin will land on top of the previously unejected strike. These coins will then crush and bond together. This may occur many times as more coins bond.

Coins Struck on Feeder Finger Tips

After a recent tour of the U.S. Mint in Philadelphia, it was discovered that the minting process had changed to some degree. One of the changes was that “feeder fingers” were used during the striking of all denominations of U.S. coins. Prior to this tour, U.S. coins that were struck on feeder finger tips were authenticated and described as being struck on aluminum scrap. Coins from all modern denominations have been discovered that were struck on the tips of these feeder fingers.

Struck Fragments

The blanking press takes the coils of metal strips and punches blanks out of it, ejecting the webbing at the other end. The webbing is cut into small scrap pieces to be melted and recycled. Occasionally a scrap piece will be mixed with the blank planchets and struck by the dies. Struck fragments are rare in the larger denominations. These can be uniface or die struck both sides and are very rare on type coins.

Mated Pairs

Mated pairs involve two individual coins with different errors that were struck together at the same time. Mated pair error combinations can be found in most error types and come in many shapes and sizes. Mated pairs can be overlapped when one of the coins is struck off-center on top of another coin. Another type involves a brockage where a struck coin was perfectly centered on a blank and restruck. Some mated pairs involve a die cap where the cap and brockage coin are discovered together, but this is a scarce find.

The rarest mated pair type involves two die caps (obverse and reverse) where both dies were capped at the same time and both die caps are mated. This last type is extremely rare and there are only a few known examples of mated pairs involving an obverse die cap and reverse die cap. There are several of these mated pairs known on Kennedy Halves including two dated 1976, which is the Bicentennial year. One of the most spectacular mated pairs involve two Barber Dimes, an obverse die cap mated to a reverse die cap and are unique.

Mated pairs can also involve an off-metal where a smaller blank planchet or smaller struck coin was struck on top of a larger coin. This type is extremely rare. The most spectacular pair known is a double struck Franklin Half which was mated to a Lincoln Cent. The Lincoln Cent blank was on top of the obverse of the struck Franklin Half. This pair was then struck together. It is unique.

Transitional Errors

A transitional error occurs when a coin is struck on a planchet from a previous year with different metal composition. The most famous transitional is a 1943 copper cent struck on a 1942 copper blank. 1943 cents were struck in steel because of the copper shortage during World War II. Other famous transitionals include 1965 coinage struck in silver instead of clad.

There are also transitionals struck on blanks for the next year. An example is 1964 coinage in clad instead of silver. Most recently, transitionals were discovered involving the SBA and Sacagawea Dollars of 1999 and 2000. There are eight known 1999 SBA Dollars struck on the brass planchet for the 2000 Sacagawea Dollar, and four known 2000 Sacagawea Dollars struck on a clad planchet for the 1999 SBA Dollar.

U.S. Gold Errors

Major mint errors on U.S. Gold coins are the most prized category of all mint errors. Gold errors are very rare and a few have traded in the \$75,000 to \$100,000 range. Even a broadstruck U.S. Gold coin can easily sell for \$15,000 to \$30,000 compared to a broadstruck Cent, Nickel, Dime or Quarter which all sell for well under \$10. Many serious collectors of Gold Errors have to wait patiently for months and sometimes even years to acquire that one special piece for their collection.

The prices listed here are for common dates in AU-Unc. Better dates and errors that are in gem condition are worth considerably more.

Indents

An indent error occurs when two blanks are fed inadvertently into the same collar, with one blank partly overlaying on top of the other. When the hammer die strikes this combination, the upper blank will be forced into the lower blank, creating a depression which is shaped similar to the upper blank. A scarce type of indent occurs when a blank intended for one denomination lands on top of a blank from a different denomination.

Die Caps

Die caps are caused when a struck coin sticks to the upper hammer die. Once the coin is struck to the die face, the reverse of the struck coin becomes the new die face. When the next blank is fed into the collar and the strike occurs, the reverse design of the adhered struck coin impresses itself into the new blank. This struck coin is a brockage strike. The coin that adhered to the upper die is known as a die cap. This process repeats itself as more coins are struck by the cap. The greater the number of strikes, the higher the cap metal will be pushed around the upper die shaft. Eventually, the cap brakes away from the die in the shape of a thimble.

Die Adjustment Strikes

Die adjustment strikes are also known as die trials. This error occurs when a coin is struck from the press with very little pressure. When the press is being set up and adjusted, extremely weak strikes occur as the strike pressure reaches its optimum level. These die trials are destroyed after being struck and are rarely found in circulation.

Double Denominations

One of the most expensive, popular, and desired types of errors are the double denominations. This error happens when a coin is struck on a previously struck coin of a smaller denomination. Examples are a cent on a struck dime, and a nickel on a struck cent. The most dramatic are those with considerable design visible from the original strike. There are a few known double denominations with different dates.

Brockages

A brockage error can only occur when there are two coins involved. One of the coins involved will always be a struck coin which has not ejected properly. That struck coin will find its way back between the dies and will be struck next to a blank planchet which was fed into the collar. The image of that first struck coin will be impressed into that side of the blank planchet. The result will be a second coin which has images of the first coin impressed into it. Those images will be pressed into the coin and the image will be in reverse. This incuse sunken image is known as a brockage.

Double & Multiple Strikes

When a blank planchet is struck by the dies, the normal procedure is for the feeders to eject the struck coin out of the collar and into a chute. If there is a malfunction and the struck coin isn't ejected, it may receive a second or third strike by the dies. A multiple struck coin can happen in many ways and have many combinations of errors.

(Since each double and multiple strike can vary from being 10% off-center to 90% off-center, the prices listed below can be substantially more based on the percent off-center and dramatic overall look.)

Off-Center Strikes

Off-center coins are one of the most common and best known types of errors. This happens when a blank which is supposed to be fed into the press, lands in the collar improperly. When this occurs only part of the blank is between the upper and lower dies. When the dies strike the blank, only that part will be struck with a design.

Off-Metals

Off-metal and wrong planchet errors occur when a correctly made blank from one denomination is accidentally fed into a press for another denomination. Examples are a nickel struck on a cent planchet and a cent struck on a dime planchet. The coin struck on an incorrect blank will weigh exactly what the denomination of that blank would have been. An even more dramatic wrong planchet error is a coin struck on a previously struck coin of a different metal.

Counterbrockages

A counterbrockage error involves a cap die and a previously struck coin. When a cap die strikes a previously struck coin, the obverse design from that struck coin will be impressed into the cap. The result will be a design where the cap face will be an incuse brockage. When a new blank is struck by this cap die with an incuse brockage image, the obverse will have a raised and spread image from that incuse design of the cap. This brockage impression is known as a counterbrockage.

Fold-Over Strikes

A fold-over coin is one of the most dramatic types of errors. It occurs when the blank is standing vertically between the dies. During the strike, the force is so great that it bends and folds the blank. These fold-overs can be on-center or off-center, and come in many different shapes. There are a few fold-overs with multiple errors, either with an additional strike or fold-over. Denominations above quarters are very scarce.

Martha Washington Test Pieces

There is one set of a Dime, Quarter and Half struck by Martha Washington dies that are permanently housed in the Smithsonian Institute, embedded in blocks of lucite. According to United States Pattern and Related Issues, by Andrew W. Pollock III, “the only trial pieces purported to have survived metallurgical testing in 1965 were the Dime, Quarter Dollar, and Half Dollar equivalent strikes in copper-nickel clad over copper.”

Mike Byers’ discovery of the Martha Washington Test Piece on a copper-zinc Cent planchet struck 10% off-center with a uniface reverse was a front page Coin World article on August 7th, 2000.

Missing Edge Lettering

A mint error has recently been discovered on the new Presidential Dollars. These coins inadvertently left the United States Mint without edge-lettering on them. The inscriptions 'In God We Trust,' 'E Pluribus Unum,' as well as the mint mark and year are absent from these errors.

The Jefferson Dollar Missing Edge Lettering discovery coin sold on eBay for \$4,050.00 and was certified MS 65 by PCGS.

It recently re-sold on eBay for \$4,500.

(Prices as of November 1, 2007 and are for certified pieces by PCGS and NGC)

CLAD DIME STRIP

We firmly believe that this is the largest piece of clad dime strip available on the market today. In addition, this strip is very rare in that it has overlapping holes, indicating that a large number of clips were the result when this strip was punched. Clad strips are now cut into bits by the same machine that punches the blanks. It appears to be extremely unlikely that any additional strip will become available as long as this mint policy remains in force.

CoinLink operates on one simple principle...

To provide the numismatic community with access to the “best” numismatic information, news and resources on-line.

CoinLink® was started in 1995 by Anteater Design Group Inc., and is headquartered in Longwood, Florida (just northeast of Orlando).

For over 12 years we have been proud to operate the most popular and comprehensive numismatic directory on the web, referring collectors to thousands of numismatic sites, and providing unbiased access to resources that are informative and relevant to collectors and dealers alike.

The reason for our success has been a willingness to listen to our users suggestions and provide innovative solutions to aggregating the diverse and ever changing sources of numismatic information available.

CoinLink does not buy or sell coins. We have NO commercial or financial interest in any company that does. We do NOT compete against our advertisers.

Rather, our goal is to provide a platform from which dealers and collectors can find each other and stay informed about what is happening within the marketplace and within the hobby.

As we move into our 12th year of operations, we want to thank all of the users, supporters and sponsors who have made CoinLink what it is today, and who continue to shape the direction in which CoinLink will grow in the future.

Obverse: Right wheatstalk shows at base of Lincoln's bust. "O" of One shows above Lincoln's eyebrow. There are only two of these known.

\$850.00

1c 1910 PCI FN12 (Red Label), damaged rim - Flipover in collar double strike. Reverse: Outline of Lincoln, Trust & the full date shows but is faint. Obverse: Both Wheatstalks, part of the words "United" & "of". Letter "T" of Cent runs across Lincoln's nose. Scarce error for date.

\$500.00

AL'S COINS FEATURED INVENTORY

1966 PCGS MS64 - Multiple error:

1. Off Metal - quarter struck on a clad dime planchet.
2. Off center - 30%
3. Obverse - 60% indent

Very scarce triple error off metal with a full date.

\$1,200.00

1c 1919 Au - Double struck. 1st strike on center. 2nd strike 15% off center & die struck. What looks like rim dings is actually from the 2nd strike. A small dark spot on reverse.

\$550

AL'S COINS FEATURED INVENTORY

1c 2002-D PCGS MS 64 Red - Double struck and rotated 90 degrees. Very scarce error for year/mintmark.

\$695

Multiple error: No date double struck nickel, struck on a clad dime planchet. Unc with obverse & reverse damage. Both strikes off center & die struck.

\$1,200

AL'S COINS FEATURED INVENTORY

1943 off metal - 1c struck on a dime planchet. Weighs 2.43 grams. Weakly struck, but all numerals are clear. Horizontal obverse lamination across bottom. Coin looks cleaned at one time.

\$1,495

1998 U.S. Silver Eagle Struck on an Elliptical Planchet NGC MS 68. Elliptical planchets are among the rarest type of mint error. The larger the denomination, the fewer are known. The fact that this U.S. Silver Eagle exists that was struck on an elliptical planchet is unbelievable. Instead of weighing 31.10 grams, it weighs 26.59 grams. A spectacular error.

AL'S COINS FEATURED INVENTORY

1990-S Proof Lincoln Cent double struck NGC PF 67 Red. This San Francisco Mint Proof Lincoln Cent was double struck in the collar on the obverse. Most U.S. Proof errors that are known were struck in the late 60's and early 70's and were sold in a large estate a few years ago. This proof error is very unusual since the first strike was off-center at 3:00 and the second strike was centered, obliterating most of the original strike. Rare.

\$1,850

1905 Liberty Nickel Struck on a foreign planchet NGC MS 62. This is a century old Liberty Nickel off-metal, struck on a foreign planchet, the weight is 2.77 grams. It is in Gem Mint State condition and is very undervalued.

\$1,750

1787 Fugio Cent Triple Struck SEGS VF 20

\$3,995

1964 Silver Kennedy Half uniface obverse double struck 95% off-center PCGS MS 63. This is a very unusual multiple error on a 1964 Silver Kennedy Half. The obverse was struck through a cap die on the first strike. The second strike was off-center and die struck both sides. This came out of an estate along with a few other dramatic Silver Kennedy Half Errors.

\$2,750

AL'S COINS FEATURED INVENTORY

2000-P Sacagawea Dollar triple struck with indent ANACS MS 63. This multiple error Sacagawea Dollar is very dramatic and unusual. It was struck three times and also has an indent on the reverse. It is part of a mated pair and a coin is out there somewhere that would mate to this Sacagawea Dollar.

\$1,750

2000-P Sacagawea Dollar struck three times on double clipped planchet ANACS MS 60. This Sacagawea Dollar was struck three times on a planchet that has two clips. It is a rare multiple error and is very dramatic. There is a scratch on the reverse which ANACS noted on the holder.

\$850

AL'S COINS FEATURED INVENTORY

1875-CC Liberty Seated Dime struck off-center ANACS F 12. All major errors on Carson City coins are rare. This Liberty Seated Dime was struck 15% off-center.

\$1,495

Lincoln Cent multi struck off-center on Dime planchet NGC MS 64. This Lincoln Cent was struck many times off-center on a clad Dime planchet. Part of the head is visible on the obverse but the reverse is uniface. It is an unusual combination of many different errors on one coin.

ERROR WORLD

Join the *hottest*
Error Coin Club on the Net!

e r r o r w o r l d c l u b . o r g

The Error World on-line coin club exists for the purpose of advancing the knowledge and the field of error coin collecting.

Error World is dedicated to the promotion, discussion and dissemination of facts and ideas about error coinage, both domestic and world-wide.

Error World exists as a vehicle to bring collectors of both foreign and domestic error coinage together in a professional and relaxed atmosphere where they can exchange information, display photos and engage in lively debate about error coinage.

Error World is a non-profit organization with all revenues being put back into the club to provide improved services to the members of the club.

Error World will, from time to time, accept contributions from designated Patrons in the form of contest prizes, and/or cash to be used to defray club expenses.

Error World will, from time to time, attempt to obtain sponsors from the numismatic field who will bring price saving offers to Error World members.

BUYING MAJOR ERROR COINS & CURRENCY

If you have a single major mint error coin, either a recent issue or an older type coin, or 1,000 Off-Center Cents, please contact us. We stock over 60,000 Major Mint Error Coins and constantly need to purchase Major Error Coins for our clientele (please note that we do not deal in or buy Die Varieties, Damaged Coins, Doubled Dies, Filled Dies, or Die Cracks).

We do buy Major Mint Errors - such as Off-Center, Off-Metals, Double Strikes, Clad Layers missing, Die Caps, Double Denomination, etc.

Because of the many differences in each Error Coin we request that you send scans of your coin(s) to us for our examination and firm offer.
